17. Review and Amendment

1. Purpose

This General Farm Operations Manual establishes the standard operating framework for the day-to-day management of WGNI Farm. It governs facility management, cleanliness, weed control, security, personnel conduct, store management, procurement, and contractor oversight across all areas of the farm.

This manual applies to all permanent staff, casual workers, security personnel, and contractors residing on or accessing the farm. It is designed to remain valid as the farm grows, its infrastructure expands, and its workforce evolves. Where specific facilities or roles change, the relevant sections must be updated. The underlying governance principles remain in force.

2. Scope

This manual covers all physical areas of WGNI Farm including but not limited to the greenhouse facilities, open field, fish pond facility, poultry area, security house, staff quarters, store, factory facility, and all access roads and paths within the farm perimeter. It applies at all times, during working hours, after hours, and on weekends.

3. Farm Facility Overview

WGNI Farm is a multi-unit agricultural facility currently in active production and simultaneous expansion. The farm operates a number of greenhouse kits at various stages: some in active production, some fully constructed and awaiting preparation, and others currently under construction. The number of active, prepared, and under-construction kits will change as the farm scales. The Farm Register must be updated by the Farm Manager whenever a facility changes status.

In addition to the greenhouse facilities, the farm operates fish ponds, a poultry unit, open field production areas, a store, a factory facility under construction, a security house, staff quarters, and a borehole water supply system. All facilities are governed by the rules in this manual and their respective departmental SOPs.

4. Organisational Structure and Hierarchy

WGNI Farm operates under a clear dual-channel reporting structure. Understanding this structure is essential for all personnel.

Reporting Lines

```

CEO
|
+-- EA's (reports to CEO and Chairman)
|   |
|   +-- Farm Manager (technical oversight)
|       |
|       +-- Fish Farm Worker
|       +-- Poultry Attendant
|       +-- Greenhouse and Field Labour
|       +-- Security Personnel (x3)
|
+-- Farm Supervisor (parallel, reports independently to CEO/Chairman)
    |
    +-- Store Management
    +-- Contractor Oversight
    +-- Construction Labour and Artisans
  
```

Key Structural Principles

- The Farm Manager and the Farm Supervisor are parallel positions with separate and independent reporting lines. Neither is superior to the other.
- The Farm Manager is the technical authority on all crop, livestock, fish, and agronomic matters on the farm.
- The Farm Supervisor is the administrative and operational authority over the store, inventory, procurement execution, and contractor management.
- The Farm Supervisor reports directly and independently to the CEO. These reports are shared openly with the EA.
- The EA provides independent oversight of farm operations and reports to both the CEO and Chairman.
- The Farm Manager and the Farm Supervisor must not both be absent from the farm at the same time under any circumstance. At least one of the two must remain on the farm at all times. Any planned absence by either must be communicated to the EA in advance and confirmed before departure.

5. Roles and Responsibilities

5.1 EA's

- Provides independent oversight of all farm operations and reports to the CEO and Chairman.
- Reviews and compiles daily and weekly operational reports submitted by the Farm Manager and Farm Supervisor.
- Approves all procurement between N50,000 and N200,000.
- Escalates critical incidents, including mass mortality events, security breaches, structural failures, and staff misconduct, to the CEO.
- Coordinates between the Farm Manager and Farm Supervisor where cross-functional decisions are required.
- Receives all receipts and purchase documentation via Notion or the designated WhatsApp Group.

5.2 Farm Manager

- Holds full technical oversight of all production activities on the farm, covering greenhouse, open field, fish ponds, and poultry.
- Plans and directs all agronomic activities including planting schedules, feeding programmes, health monitoring, and harvesting.
- Supervises all production staff: fish farm worker, poultry attendant, greenhouse and field labour, and security personnel.
- Conducts daily facility and sanitation inspections across all farm zones.
- Initiates all procurement requests and submits them to the Farm Supervisor for execution.
- Approves all procurement expenditure below N50,000.
- Authorises the release of all items from the store in writing before the Farm Supervisor may issue them.
- Submits daily and weekly technical reports to the EA.
- Must not leave the farm at the same time as the Farm Supervisor. Prior notification to the EA is required for any planned absence.

5.3 Farm Supervisor

- Acts as second-in-command on the farm in an administrative and operational capacity.

- Manages the store and all inventory, covering receiving, issuing, recording, and auditing all stock.
- Executes all procurement as directed by the Farm Manager, including sourcing, purchasing, and documenting all acquisitions.
- Oversees all contractors and construction activities on the farm.
- Submits detailed independent reports on store, procurement, and contractor activities directly to the CEO, shared with the EA.
- Must not leave the farm at the same time as the Farm Manager. Prior notification to the EA is required for any planned absence.

5.4 Fish Farm Worker

- Executes all daily fishpond operations across all active pond sections as defined in the Fishpond Management SOP.
- Maintains the daily pond log, feeding records, mortality records, and sorting records.
- Reports all abnormalities immediately to the Farm Manager.

5.5 Poultry Attendant

- Manages daily poultry operations including feeding, water supply, health monitoring, egg collection, and mortality recording.
- Maintains all poultry records and submits daily logs to the Farm Manager.
- Reports all abnormalities, disease signs, or mortality incidents immediately to the Farm Manager.

5.6 Greenhouse and Field Labour

- Carries out all assigned crop production activities under the direct supervision of the Farm Manager.
- Responsible for planting, watering, pruning, harvesting, and general field maintenance as directed.
- Maintains cleanliness in and around their assigned work zones.

5.7 Security Personnel (x3)

- All three security personnel reside permanently on the farm.
- They operate on an informal on-call arrangement. At least one security officer must be always stationed at the gate without exception.
- When one security officer steps out of the farm, one of the remaining two must immediately assume gate duty.
- Each security officer must maintain a personal step-out register recording every departure from and return to the farm.
- Security officers conduct regular patrols of the farm perimeter, more frequent during night hours.
- All visitors without exception must sign the visitor register before being permitted entry.
- Security personnel enforce all access and restricted zone rules.
- Any security incident must be reported to the Farm Manager immediately and logged in the incident register.

5.8 Construction Labour and Artisans (Contractors)

- Contractors are temporary residents of the farm and are not farm employees.
- They are supervised by the Farm Supervisor for all construction and project-related activities.

- They are subject to all farm rules in this manual including security sign-in, cooking rules, sanitation, and restricted zone access.
- They are restricted to their designated construction zones. Access to active production areas requires explicit permission.

6. Personnel Management

6.1 Hiring and Dismissal

- All hiring and dismissal decisions, including casual and daily labour, require the approval of the EA before being enacted.
- The Farm Manager may identify and recommend candidates for hiring or flag staff for dismissal but may not unilaterally execute either action.
- Recommended dismissals must be documented with specific reasons and submitted to the CEO before any action is taken.

6.2 Conduct and Discipline

- All farm staff and residents are expected to conduct themselves in a manner that upholds the professional standards of WGNI Farm.
- Misconduct, including theft, negligence, insubordination, damage to farm property, or violation of any rule in this manual, must be documented and escalated to the EA.
- Repeated minor violations or a single serious violation may result in dismissal subject to EA approval.

6.3 Staff Absence and Farm Coverage

- Any planned absence from the farm by a permanent staff member must be communicated to the Farm Manager in advance.
- The Farm Manager and Farm Supervisor must never both be absent from the farm simultaneously.
- In the event of an unplanned absence by the Farm Manager, the Farm Supervisor assumes responsibility for farm oversight and must notify the EA immediately.

7. Facility Management

7.1 Daily Facility Inspection

The Farm Manager is responsible for conducting a daily walkthrough inspection of all active farm facilities. This inspection must cover:

- All active greenhouse kits: structural integrity, ventilation, irrigation systems, and crop condition.
- Greenhouse kits under construction: safety compliance and contractor activity.
- Greenhouse kits constructed but not yet prepared: condition and readiness status.
- Fish pond area: water quality, structural condition, and fish health indicators.
- Poultry area: housing condition, feed and water availability, and bird health.
- Store: security, condition of stored items, and any signs of pest or moisture damage.
- Staff quarters and security house: general cleanliness and structural condition.
- Outdoor cooking area: cleanliness and fire safety compliance.
- Toilet and bathroom facilities: cleanliness and functional condition.
- Farm perimeter and pathways: weed status, debris, and access conditions.
- Factory facility and construction zones: safety compliance and contractor activity.

Findings from the daily inspection must be logged and any deficiencies actioned within 24 hours.

7.2 Greenhouse Facilities

- Access to greenhouse kits under active construction is restricted to authorised construction personnel only.
- No production activities are to be commenced in any kit until it has been formally signed off as ready by the Farm Manager.
- Kits that are fully constructed but not yet prepared are the Farm Manager's responsibility to schedule for preparation in line with the farm's production plan.
- The number of active, under-construction, and prepared kits will fluctuate as the farm scales. The Farm Register must always reflect the status.

7.3 Factory Facility

- The factory facility is currently under construction and is a restricted zone.
- No unauthorised access is permitted.
- The Farm Supervisor is responsible for overseeing factory construction progress and reporting updates to the EA.

7.4 Water and Borehole Infrastructure

- The borehole and solar pump system supply water to all farm operations.
- The Farm Manager is responsible for ensuring the pump is operational and water is distributed appropriately across all production units.
- Any pump faults or pipeline issues must be reported to the EA immediately and repaired as a priority.

8. Cleanliness and Sanitation

Cleanliness is a shared responsibility across all farm residents and workers. There is no dedicated cleaning staff. Every person on the farm is responsible for the sanitation of their own quarters and immediate work zone.

8.1 Daily Sanitation Responsibilities

- Every farm resident, including permanent staff, security, and contractors, is responsible for maintaining the cleanliness of their personal quarters and immediate living area on a daily basis.
- Every worker is responsible for the cleanliness of their assigned work zone throughout and at the end of each working day.
- Waste generated during work must be cleared from the work zone at the end of each day and taken to the designated disposal area.

8.2 Farm Manager Daily Inspection

- The Farm Manager conducts a daily sanitation inspection of all quarters, common areas, work zones, and farm facilities.
- Any area found below acceptable cleanliness standards must be rectified by the responsible person before the close of that day.
- Persistent failure to maintain cleanliness standards will be escalated to the EA as a conduct matter.

8.3 Saturday Whole-Farm Deep Clean

Every Saturday, a coordinated whole-farm deep clean is mandatory for all residents and farm workers. This covers:

- All personal quarters and living areas.
- All work zones: ponds, poultry area, greenhouse surroundings, and open field edges.
- Farm pathways and common areas.
- Toilet and bathroom facilities.
- Outdoor cooking area.
- Store surroundings.
- Construction zones, which are the contractor's responsibility.

The Farm Manager supervises and coordinates the Saturday clean and confirms completion before close of day. Any area not completed to standard must be rectified before the responsible party leaves the farm for the day.

8.4 Toilet and Bathroom Facilities

- Toilet and bathroom facilities are currently male-only. Female staff or visitors requiring facilities must be accommodated by alternative arrangement. The EA should be notified of this requirement for future facility planning.
- All users are responsible for leaving toilet facilities clean after use.
- Toilet facilities are included in the Farm Manager's daily inspection.

9. Weed Management

Weed management applies across all zones of the farm, covering greenhouse surroundings, open field, pond perimeter, orchard and planting areas, farm paths, and construction zones. It is an ongoing operational responsibility, not a periodic exercise.

9.1 Approved Methods

- Manual: cutlass, hoe, and hand-pulling for close-range and precision weeding.
- Chemical: Glyphosate (non-selective, systemic) and Paraquat or Glufosinate (contact herbicide) for open and perimeter areas.

9.2 Chemical Restriction Zones

Chemical herbicides must never be applied inside or in direct contact with the following:

- Inside any greenhouse kit, whether active, prepared, or under construction.
- Directly around or over the fish pond sections.
- Directly over or into the open field crop area.

Chemical application is permitted in the surrounding perimeter of these zones at a prescribed minimum safe distance:

- Minimum 5 metres from any greenhouse kit wall before spraying begins.
- Minimum 10 metres from the edge of any fish pond section.
- Minimum 5 metres from the crop edge in the open field.

These distances are non-negotiable. Spraying closer than prescribed without written approval from the Farm Manager is a disciplinary matter.

9.3 Chemical Application Rules

- Only the Farm Manager or a directly supervised, trained worker may apply chemical herbicides.
- Full PPE, including gloves, boots, eye protection, and appropriate clothing, must be worn at all times during application. No exceptions.

- Chemical application must not be carried out on windy days. Drift onto crops, ponds, or greenhouse structures is prohibited.
- All chemical usage must be logged: date, zone treated, chemical used, quantity, and name of applicator.
- Chemicals must be stored in the store under lock and key and must never be left unattended in the field.

9.4 Weed Management Schedule

- Manual weeding in active growing zones must be carried out as part of regular crop maintenance. Frequency is determined by the Farm Manager based on crop stage and conditions.
- Chemical treatment of perimeter and pathway areas is to be conducted at minimum every 4 to 6 weeks or as directed by the Farm Manager.
- All weed management activities must be logged and included in the weekly farm report.

10. Security Management

10.1 Security Personnel and Arrangement

WGNI Farm has three security personnel who reside permanently on the farm. They operate on an informal on-call arrangement with no fixed shift rotation. The following rules are absolute and non-negotiable:

- At least one security officer must be stationed at the main gate at all times, day and night, weekdays and weekends.
- When one security officer steps out of the farm for any reason, one of the remaining two must immediately assume gate duty before the departing officer leaves.
- All three security officers are responsible for perimeter patrols, conducted regularly throughout the day and more frequently during night hours.

10.2 Step-Out Register

Every security officer must maintain a personal step-out register. This register is a permanent record and must be completed without exception every time a security officer leaves or returns to the farm. Each entry must record:

Field	Required
Date	Yes
Time of departure	Yes
Destination	Yes
Reason for leaving	Yes
Time of return	Yes
Signature	Yes

The step-out register is reviewed by the Farm Manager during daily inspections. Any missing entry is a disciplinary matter.

10.3 Visitor Access and Visitor Register

Effective from the date of issue of this manual, a visitor register is mandatory at the WGNI Farm gate. No visitor may enter the farm without signing the visitor register. This rule applies

without exception regardless of the visitor's identity, status, or relationship to farm personnel. Each visitor entry must record:

Field	Required
Date	Yes
Full name of visitor	Yes
Organisation or purpose of visit	Yes
Name of farm contact being visited	Yes
Time of entry	Yes
Time of exit	Yes
Vehicle registration (if applicable)	Yes
Signature of visitor	Yes

- The visitor register is to be procured immediately and placed at the gate as a matter of priority.
- The gate security officer is responsible for ensuring every entry is complete before the visitor proceeds beyond the gate.
- Vehicles making deliveries must also be logged, including registration number, driver name, purpose, and time in and out.

10.4 Restricted Zones

The following areas are designated restricted zones requiring explicit permission before access:

Restricted Zone	Permission Required From
Store and inventory room	Farm Supervisor
Greenhouse kits in active production	Farm Manager
Fish pond area	Farm Manager
Poultry area	Farm Manager
Factory facility	Farm Supervisor

- Security officers must deny access to any person attempting to enter a restricted zone without confirmed permission.
- Contractors are restricted to their designated construction zones only.

10.5 Incident Reporting

- Any security incident must be reported to the Farm Manager immediately and escalated to the EA on the same day if serious.
- All incidents must be recorded in the Security Incident Register: date, time, description, persons involved, and action taken.

11. Store and Inventory Management

The store is managed exclusively by the Farm Supervisor and serves as the central point for all farm supplies, materials, and equipment.

11.1 Store Contents

The store holds the following categories of items:

- Cement and construction materials.
- Fuel, including petrol and diesel.
- Fish and poultry feed.
- Agrochemicals and crop inputs.
- Tools and equipment.
- Greenhouse growing materials.
- Medication and veterinary supplies.
- PPE and safety gear.

11.2 Requesting Items from the Store

- All requests for items from the store must first go through the Farm Manager.
- The Farm Manager reviews and authorises the release in writing. Verbal approvals are not sufficient.
- The Farm Supervisor issues items only upon receipt of written authorisation from the Farm Manager.
- No item may be released from the store without a completed and signed store issue record.

11.3 Store Issue Record

Every item issued from the store must be recorded in the physical store ledger. Each entry must include:

Field	Required
Date of issue	Yes
Item description	Yes
Quantity issued	Yes
Unit of measure	Yes
Requesting staff member or unit	Yes
Authorised by (Farm Manager)	Yes
Issued by (Farm Supervisor)	Yes
Purpose or work order	Yes

11.4 Returns to Store

- Unused items may be returned to the store and must be logged upon return.
- A return entry must be made in the store ledger: date, item, quantity returned, condition, and name of person returning.
- Returned items are inspected by the Farm Supervisor before being accepted back into inventory.

11.5 Stock Records and Inventory

- All store records are maintained in a physical ledger kept in the store.

- The Farm Supervisor is responsible for keeping the ledger current and accurate at all times.
- A full stock count must be conducted at the end of every month and the results submitted to the EA as part of the monthly farm report.
- The store ledger is subject to review by the Farm Manager and EA at any time.

11.6 Reorder and Restocking

- The Farm Supervisor is responsible for monitoring stock levels and flagging low stock to the Farm Manager before depletion occurs.
- As a general guideline, critical items, including feed, fuel, chemicals, and medication, should be flagged for reorder when stock falls to approximately two weeks of estimated usage remaining.
- Reorder requests are initiated by the Farm Manager and executed by the Farm Supervisor through the procurement process in Section 12.

12. Procurement Rules and Regulations

All procurement at WGNI Farm must follow the rules in this section without exception. No purchase may be made outside of this process regardless of urgency.

12.1 Procurement Process

1. The Farm Manager identifies the need and initiates a procurement request in writing, specifying item, quantity, estimated cost, and purpose.
2. The Farm Manager approves requests within their spending authority (below N50,000) or escalates to the EA for higher-value items.
3. The Farm Supervisor receives the approved procurement request and executes the purchase, covering sourcing, purchasing, and taking delivery.
4. All purchased items are received into the store by the Farm Supervisor, inspected, and entered into the store ledger.
5. All receipts and purchase documentation are submitted to the EA without exception via Notion or the designated WhatsApp Group.

12.2 Approval Thresholds

Expenditure Amount	Approving Authority
Below N50,000	Farm Manager
N50,000 to N200,000	EA
Above N200,000	CEO

- These thresholds apply per transaction. Splitting a single purchase into smaller amounts to avoid a higher approval tier is strictly prohibited and constitutes a disciplinary offence.
- Emergency procurement above the Farm Manager's threshold must still receive EA or CEO approval. Approval may be sought by phone or message but must be confirmed and documented before the purchase is made.

12.3 Receipt and Documentation Requirements

- A receipt or proof of purchase is required for every procurement transaction without exception.

- All receipts and purchase documentation are submitted to the EA via Notion or the designated WhatsApp Group immediately after purchase.
- Where a receipt cannot be obtained, a written explanation must be submitted to the EA and countersigned by the Farm Supervisor.
- Procurement without documentation will not be ratified and may be treated as a conduct matter.

12.4 Prohibited Procurement Practices

The following are strictly prohibited:

- Purchasing items without prior written authorisation at the appropriate level.
- Splitting transactions to circumvent approval thresholds.
- Personal purchases made using farm funds.
- Accepting goods before they have been inspected and logged into the store.
- Procurement from suppliers with a known conflict of interest without disclosure to the EA.

12.5 Simultaneous Absence Rule

Since the Farm Manager initiates procurement and the Farm Supervisor executes it, their simultaneous absence from the farm would halt the procurement chain entirely. This is an additional operational reason, beyond general oversight, why the Farm Manager and Farm Supervisor must never both be absent at the same time.

13. Contractor Management

13.1 Scope

Contractors at WGNI Farm include greenhouse construction workers, block moulders, artisans, and any other temporary workers engaged for specific construction or installation projects. They are not farm employees. However, they are fully subject to all farm rules, security protocols, and conduct standards in this manual for as long as they reside on or access the farm.

13.2 Supervision

- The Farm Supervisor has direct oversight of all contractor activities on the farm.
- Contractors report to the Farm Supervisor for all project-related instructions, scheduling, and material requirements.
- The Farm Manager may raise safety or operational concerns relating to contractor activities to the Farm Supervisor or EA.

13.3 Access Rules

- Contractors are restricted to their designated construction zones at all times.
- Access to any restricted zone requires explicit permission from the Farm Manager or Farm Supervisor as applicable.
- Contractors must be formally logged as temporary residents in the gate register, with their expected duration of stay noted at arrival and their departure date recorded when they leave.

13.4 Accommodation

- Contractors currently share quarters with permanent staff.

- The Farm Supervisor is responsible for assigning specific areas to contractors at the start of each engagement. A clear separation of living areas must be maintained where space allows.
- Contractors are subject to the same cooking, sanitation, and general conduct rules as all other farm residents.

13.5 Contractor Reporting

- The Farm Supervisor submits a weekly contractor activity report to the EA covering: progress against construction milestones, workforce on-site, materials consumed, issues encountered, and projected completion dates.

14. Cooking and Fire Safety

14.1 No Indoor Cooking Rule

Cooking is strictly prohibited inside any building on WGNI Farm. This rule applies to all residents without exception, including permanent staff, security personnel, and contractors. The use of gas stoves, open flame, or any cooking apparatus inside any building, including staff quarters, the security house, or any other enclosed structure, is a serious safety violation and will be treated as gross misconduct.

14.2 Designated Outdoor Cooking Area

There is currently no formally designated outdoor cooking area. The following must be implemented immediately upon issuance of this manual:

- The Farm Manager and Farm Supervisor are jointly responsible for identifying and designating a suitable outdoor cooking area.
- The area must be away from all buildings, fuel storage, chemical storage, dry vegetation, and construction materials.
- The area must be clearly marked and communicated to all residents.

Until a designated area is formally assigned, all cooking must be carried out in open outdoor spaces with a minimum clearance of 5 metres from any building, fuel, or flammable material.

14.3 Cooking Rules

- All cooking must be done outdoors in the designated cooking area.
- No gas cylinders or gas stoves are permitted inside any building on the farm.
- Open fire cooking must be fully extinguished, not merely left to die out, after use.
- No cooking is permitted after 10:00 PM without explicit permission from the Farm Manager.
- Any fire incident, however minor, must be reported to the Farm Manager immediately and logged in the incident register.

15. Waste Disposal

15.1 Current Status and Pending Action

There is currently no designated waste disposal point on WGNI Farm. Establishing one is a priority action. The Farm Manager and Farm Supervisor are jointly responsible for identifying and setting up a designated disposal area within 30 days of the date of issue of this manual.

Requirements for the designated disposal area:

- Located away from all water sources including the borehole, fish ponds, and drainage channels.

- Located away from all active growing zones and greenhouse kits.
- Located downwind of residential and production areas where possible.
- Clearly marked and accessible to all farm workers and residents.
- Divided into at minimum two sections: organic or biodegradable waste and non-organic or non-biodegradable waste.

15.2 Interim Waste Disposal Rules

Until the designated disposal point is established:

- All organic waste, including food waste, crop trimmings, fish carcasses, and poultry litter, must be buried or composted in a designated open area away from all water sources and living quarters.
- Construction debris must be stockpiled in the construction zone and not scattered across the farm.
- Chemical containers and packaging must be triple-rinsed, clearly punctured to prevent reuse, and stockpiled separately.
- No waste of any kind is to be burned near any structure, crop area, or chemical or fuel storage point.

15.3 Ongoing Waste Management

- Each work unit is responsible for clearing its own waste at the end of every working day.
- The Farm Manager's daily inspection includes a waste management check across all zones.
- Improper disposal of waste is a disciplinary matter.

16. Record Keeping

All physical records are stored in designated folders in the store or Farm Manager's office and are available for review by the EA at any time. Digital records and submissions are made via Notion or the designated WhatsApp Group as applicable.

Record	Maintained By	Frequency
Daily Farm Inspection Log	Farm Manager	Daily
Daily Pond Log	Fish Farm Worker	Daily
Daily Poultry Log	Poultry Attendant	Daily
Security Step-Out Register	Each Security Officer	Every departure and return
Visitor Register	Gate Security Officer	Every visitor entry
Security Incident Register	Security Officer / Farm Manager	As incidents occur
Store Issue Ledger	Farm Supervisor	Every transaction
Store Return Ledger	Farm Supervisor	Every return
Monthly Stock Count Report	Farm Supervisor	Monthly
Procurement Request and Approval Record	Farm Manager / Farm Supervisor	Every procurement
Receipts and Purchase Documentation	Farm Supervisor	Every purchase, via Notion or WhatsApp

Weed Management Log	Farm Manager	Per treatment
Chemical Application Log	Farm Manager	Per application
Contractor Activity Report	Farm Supervisor	Weekly, submitted to EA
Weekly Farm Technical Report	Farm Manager	Weekly
Weekly Farm Operations Report	Farm Supervisor	Weekly
Mortality and Incident Report	Relevant unit / Farm Manager	As incidents occur

17. Review and Amendment

This manual shall be reviewed every six months or immediately following any significant operational change, including changes to farm infrastructure, personnel structure, security arrangements, or procurement policy. All amendments must be approved by the EA before implementation. The Revision History table must be updated with every approved change.
